To the hiring committee

Thank you for the opportunity to apply to the Principal UX Engineer role on Salesforce's Agentic Design System team. I have admired the Salesforce design systems work for many years, starting way back with the Lightning system in 2016. I would be thrilled to be a part of building future platforms for Salesforce customers.

To do this, I would bring my own extensive experience building, scaling, and maintaining design systems. While scaling Typetura, I developed 2 patented, design system-supportive technologies for customers ranging from Darden Studio, a well-respected, bespoke type foundry, to EL Education, the largest virtual education platform in the world, with 15,000 pages. I also recently partnered with Google to consult and guide the direction of CSS to better facilitate the implementation of flexible and resilient design systems. That partnership enables millions of designers and developers to better implement high-quality, accessible, and performant experiences.

In my previous role at Mariana Tek, I identified the need to create and implement a design system that leveraged Figma building blocks and templates that unleashed our design and development teams' abilities to iterate rapidly on new feature ideas, collaborate closely internally, and drive toward deployment. The result was a 3x improvement in velocity, a 2x reduction in errors, and a more stable and consistent customer experience. As a result of this work, the company grew from a small startup serving boutique fitness companies to an acquisition by Xplor, a multinational group interested in the services space.

I truly love the magic that happens at the intersection of design and development. I know that building great platforms means helping people build their dreams. I will bring my experience and passion to Salesforce, working across the organization to understand challenges and systemize solutions to enhance and enrich Salesforce's Agentic Design System and the organization at large. I know this passion is shared by designers and developers at Salesforce; I can tell even from outside the organization. I'm excited to work alongside these passionate individuals, serve Salesforce customers, and go home every day knowing that I have helped people dream and do big things.

Please let me know any questions you might have about my work or experience, and thank you in advance for your consideration of my application.

Warm regards,
Scott Kellum
